User & Context Analysis

The exhibition's visitors represent a broad and diverse audience—from curious families with children seeking playful, hands-on engagement.

To students and adults desiring scientific depth on complex topics like brain comparisons across species.

Visitors arrive with different motivations, from casual curiosity to structured learning, and varying levels of familiarity with neuroscience.

Museums feature self-directed, informal learning environments where visitors of all ages explore at their own pace.

People typically spend only a few minutes at each exhibit, moving non-linearly between displays and expecting quick, stimulating interactions rather than lengthy explanations.
